

Kathy Chang

Web Developer // Cambridge, MA

Greetings Esteemed Gatekeepers,

Most of us would agree that good health and good education are powerful nourishment as we grow into our better selves. My better self is someone who can meld software engineering and data science to make good health and good education more accessible to everyone.

My latest milestone towards becoming that better self was graduating from the Grace Hopper Program at Fullstack Academy, a coding bootcamp that specializes in full stack JavaScript. I'm currently looking for an internship that will strengthen my skills in software development, data analytics and visualization, and user interface design.

In the meantime, I am contributing to *Data + Design*, a free, Creative Commons-licensed book about data visualization. I'm also working through Udacity's Data Analyst Nanodegree program, which introduces the fundamentals of statistics and data science.

(IMPORTANT DISCLOSURE: I am **not** currently pursuing a degree in computer science. Instead, I am a bootcamp graduate who would like to gain more experience during the spring term: January through May 2017.)

Thank you for your time,
